

# How to disable or enable JavaScript

Do you have to disable JavaScript, sometimes known as JScript, for some reason? Here are the step-by-step instructions for majority of the browsers. By the way, Java and JavaScript are two different things, so make sure that you're looking at the correct language.

## Navigator 3.x

- Go to "Options | Network Preferences..." from the main menu
- Change to the "Languages" tab
- To enable: make sure "Enable JavaScript" check box is checked  
To disable: make sure "Enable JavaScript" check box is unchecked
- Restart the browser

## Communicator 4.x

- Go to "Edit | Preferences..." from the main menu
- Select "Advanced" panel
- To enable: make sure "Enable JavaScript" check box is checked.  
To disable: make sure "Enable JavaScript" check box is unchecked.
- Restart the browser

## Explorer 3.x

- Go to "View | Options..." from the main menu
- Change to the "Security" tab
- To enable: make sure "Run ActiveX scripts" check box is checked  
To disable: make sure "Run ActiveX scripts" check box is unchecked
- Restart the browser

## Explorer 4.x

- Go to "View | Internet Options..." from the main menu
- Change to the "Security" tab
- Select "Custom" and click on the "Settings..." button
- To enable: make sure "Enable" is selected under "Active scripting"  
To disable: make sure "Disable" is selected under "Active scripting"
- Restart the browser

Simply reloading the page, rather than restarting the browser, maybe sufficient under some browser versions.
